CLMT Technology: the Advantages

*a special fibrillation technology results in the looks of monofilament
and the performance of a fibrillated fibre*

- Easy and perfect installation of sand and infill (equal spread out) gives stability to the player.
- Natural look and feel after installation, players easily adapt to it.
- Encapsulates the infill, player has minimum contact with the infill material.
- Excellent pile anchoring for good ball behaviour.
- Safety for players, safe moving and turning.
- No splitting of the fiber, the playing surface stays constant for years.
- Easy maintenance due to the durability of the fibre (no felting or compaction).
